Dear Dr. Chelmo,

I'm **Jacob Bevier**, co-founder of Brag & Bev LLC. We've got a prototype aerosol currently performing like a deodorizer with strong vertical reach and coverage. However, our product needs to evolve into a **cleanser** — achieving cleaning function + consistency + staying within VOC regulations.

Your work at the Aerosol Engineering Lab in droplet behavior and instrumentation seems very relevant. I'd be interested in discussing whether your group could assist with:

- Droplet size / coverage / pooling evaluations
- Formulation modifications for cleaning power under VOC constraints
- Testing / advice on actuator/nozzle/can combinations for consistency

We have funding and can sign an NDA; I can share the prototype data in advance. Would you have time for a call (~20 min) to explore possibilities?

Thank you,

Jacob Bevier
