Hey Linsey,

Thank you for your quick response and letting me know I can cross you off my list. I hope you have a great rest of your week.

Thanks again.

Very respectfully,
Jacob Bevier

Thanks for reaching out. This is outside my lab's main area of expertise. Additionally, we do not have the capacity to take on new projects, but thank you for thinking of us.

Regards,
Linsey

Subject: Exploring Collaboration — Aerosol Cleaner Project Under VOC Constraints

Dear Dr. Marr,

My name is **Jacob Bevier**, co-founder of Brag & Bev LLC. We have a deodorizer-baseline aerosol prototype with good spray coverage and reach, and our next goal is to develop a **VOC-**

compliant cleanser with real cleaning power.

I believe your work in aerosol generation, air behavior, and measurement would make you a great partner. Specifically, I am looking for help with:

- Quantitative spray performance (droplet size distribution, uniform coverage, minimizing pooling)
- Guidance on hardware pairing (actuator/nozzle/can) so the cleaning formulation behaves well in production
- Formulation insights to maintain cleaning efficacy while adhering to VOC limits

Would you be open to a ~20-minute call to see if this aligns with your lab's capabilities? I'm ready to share data and test constraints ahead of time.

Best regards,

Jacob Bevier
