Dear Prof. Freedman,

My name is **Jacob Bevier**, co-founder of **Brag & Bev LLC**. We have developed an aerosol prototype that performs like a deodorizer, but our goal is to evolve it into a **cleanser** — with true cleaning efficacy, consistent spray performance, and VOC compliance.

Your research into aerosol particle morphology and physical-chemical properties seems like an excellent fit for the challenges we face. We are looking for support with:

- Measuring and analyzing spray performance (droplet size, pooling, repeatability)
- Advising on formulation adjustments to increase cleaning power within VOC limits
- Helping guide actuator/nozzle/can pairing for consistent performance

We have funding in place, can execute an NDA, and are prepared to share current data and constraints. Would you have ~20 minutes to discuss whether this project might align with your expertise?

Very respectfully,

Jacob Bevier
