Hey Andrew,

I just wanted to touch base and let you know where things stand. I'm meeting with my team on Friday to finalize direction. We have a couple of options on the table, but I felt really good about our conversations, so Spray Products will have my vote.

I've already sent the NDA to our legal team to get that ball rolling. I'm eager to be able to share the full scope of this project with you—seems like you had a firm grasp of what we'll need aerosol-wise, and I'm excited to keep that momentum going.

Very respectfully,

Jacob Bevier

Sounds like a journey.

Attached is our standard MNDA. Please review and sign if good and then I can setup a call with our VP, R&D to discuss this in more detail.

Thanks,

AW

Hey Andrew,

Well we started this backwards and began with the mechanical engineers who told us they don't do chemicals or aerosols after we retained them. They do however already have everything conceptualized and are just waiting on the size of can for them to scale to fit.

Realizing now we should have started with the formula first it is hard to say at this stage what our projected sales are and when we would launch.

There are 130 million households with at least one outdoor trashcan and the residential patent pending device is first, if we can get this going there is a commercial design pending as well.

So for annual sales I can not say and as far as product launch I was hoping by end of year but we spent 6 months stagnant with illnesses (wife with cancer and partner invasive surgery) and what not..

Very respectfully, Jacob Bevier 7604903416

Hey Andrew,

I would say neither, it would be more of a household cleanser used for a unique application. Without getting into specifics of the mechanical functions of the housing that will contain the aerosol component, the intent is for this device is to be a one time use residential outdoor trash can cleanser. Thats about as much as I can say without an NDA.

Very respectfully, Jacob Bevier 7604903416

Jacob,

Thanks for reaching out.

What is the application of the product you wish to develop? Is this for Food or Pharm?

Thanks,

Andrew (Andy) Wills | SVP, Commercial

description

We are developing a one-time-use aerosol-based cleaning device designed for interior surface coverage in medium-to-large containers. The requirements for the spray system are:

Vertical spray reach of approx. 45 inches.

360° dispersion at a 45–60° angle to achieve broad internal coverage.

Actuation will be handled by a custom housing system (impact-triggered or manual delayed release), not the nozzle itself.

Housing is intended to be scalable across can sizes, so can/nozzle performance consistency is the main requirement.

Open to recommendations on can dimensions and nozzle assemblies that can meet these performance criteria.

start

As soon as possible. We are aiming to develop and validate a prototype over the next few months to stay on track for patent filing later this year.

comments

Spray system must deliver ~45 inches vertical reach with consistent coverage.

Nozzle should provide 360° dispersion at 45–60° angle.

Actuator integrated into housing, not a standard push-button.

Exploring two trigger concepts: impact-triggered and manual delayed.

Open to engineering recommendations on design and materials.

Acceptable can size: standard 12–16 oz aerosol dimensions (flexible).

Spray consistency can be continuous or burst, whichever is most feasible.

System intended as a single-use, disposable device, compliant with DOT and aerosol safety standards.

This is a concept feasibility request — looking to validate technical direction before production.
