Hi Asif, and nice to meet you Mike,

Thank you for the clarification and for acknowledging the impact this had on today's meeting. I understand that Joe's departure was sudden and appreciate the context you're able to provide.

I also appreciate you assigning Mike to take over the mechanical scope and looping him in here. Given where we are in the project, continuity and momentum are critical at this stage. As mentioned previously, this meeting was intended to mark the transition into the mechanical phase following ARE Labs' latest results, so I want to ensure we regain alignment quickly.

To that end, I'd like to propose the following next steps:

- A near-term introductory call with Mike to review current status, mechanical objectives, and any open dependencies
- A rescheduled cross-functional working session including Rabbit, ARE Labs, and Spray Products (schedules permit) once Mike has had sufficient time to review the materials
- A clear, updated timeline outlining mechanical milestones and expected deliverables so expectations are aligned across teams

We remain committed to moving this project forward, but given the investment already made and the time elapsed, it's important that we establish clear ownership and a defined path ahead.

I'll look out for Mike's outreach and am happy to coordinate calendars to keep this moving.

Very respectfully,

Jacob Bevier

Hi Jacob,

Thank you for your feedback. I understand the frustration this lack of proactive communication has caused, and I apologize for the impact on today's stakeholder meeting.

To provide clarity, Joe's retirement was unplanned and sudden, driven by specific personal issues that we cannot discuss due to confidentiality. We are working quickly to ensure continuity for this project.

We have already assigned a senior engineer, Mike Johnston (copied), to take over the mechanical scope of this project. Mike is currently in the process of taking over these responsibilities and getting up to speed on the recent test results from ARE Labs. He will reach out to you shortly to discuss the next steps and align on a new timeline for the cross-functional working session.

Best,

Asif

Hi Asif,

Thank you for the update — this is the first time I'm learning that Joe retired.

I need to be very clear about the impact of this. Today's 3:00 PM EST meeting was intended to be our **first full cross-functional working session** with all parties involved: the chemist from Spray Products, the R&D team from ARE Labs, and Joe representing Rabbit on the mechanical side. This meeting was scheduled specifically because we believe the project is ready to transition into the mechanical phase, informed by the latest test results.

Over the past several weeks, I have been repeatedly attempting to reach Joe to provide updates and ensure alignment ahead of this meeting. Until receiving your email today, there was no indication that he was no longer with the company or that responsibility had transitioned. I only escalated outreach earlier today by cc'ing Adam because the lack of response had become concerning in the context of today's meeting.

Given that we have already paid Rabbit, and that Joe was the sole mechanical point of contact, learning of his retirement **on the day of this meeting** represents a significant communication failure. The last substantive discussion I had with Joe was roughly six months ago, at which time I explicitly raised concerns about timeline and progress. I was assured timing was not an issue and that we had as long as needed. At no point was a retirement, transition plan, or handoff communicated.

At this stage, I need immediate clarity on:

- Who at Rabbit now owns the mechanical scope previously led by Joe
- Whether Rabbit will be able to meaningfully engage with the ARE Labs and Spray Products teams in the near term
- What the realistic timeline is to onboard a new lead engineer **without further loss of continuity**

I understand personnel transitions happen, but given the financial investment already made and the dependency between teams, we should have been proactively informed well in advance — especially prior to coordinating a full stakeholder meeting.

Please advise on ownership and next steps as soon as possible so we can determine how to proceed and avoid further delay.

Very respectfully,

Jacob Bevier

Hi Jacob,

I am writing to inform you that Joe McArdle is no longer with the company, as he has officially retired. Please accept our apologies for any missed emails or delays in communication during this transition.

We are currently in the process of engaging a new engineer to take over Joe's responsibilities on the mechanical side of this project. We will need some time to get the new lead up to speed and aligned with the current progress.

We appreciate your patience and will reach out as soon as we have an update on our technical representation for this project.

Best

Asif

Good morning Joe,

I wanted to follow up directly to confirm whether you will be able to join today's scheduled discussion at **3:00 PM ET**.

As a quick recap, this meeting brings together the chemist, aerosol filler, and ARE Labs team to review the recent test results and align on next steps. Given your role on the mechanical side, your participation is an important and necessary part of this conversation, as it represents the next critical step in moving the project forward.

I also want to be candid that I have not received responses to my last several emails and updates, which is becoming concerning—particularly given the progress stage we are at and the investment already made to date. We are at a point where forward momentum depends on alignment across all parties, and your engagement is key to that.

Please let me know as soon as possible whether you will be able to attend today's call, or if there is an immediate issue preventing you from joining.

Thank you, and I look forward to your confirmation, hope to see ya later on today.

Very respectfully,

Jacob Bevier

Hey Joe,

Not sure if you have received any of my last emails but here is the meeting invite for this friday at 3pm est. If you get a chance please confirm whether or not you will be able to attend or not. I hope to see you there!

Very respectfully,

Jacob Bevier

Hi Joe,

I hope you're doing well.

I'm working to coordinate a collaborative call with ARE Labs and Spray Products to walk through the recent ARE Labs testing results and align on next steps from a mechanical and aerosol perspective.

We're targeting **Thursday, February 6 in the afternoon (Eastern Time)**. As a starting point, would either of the following work for you?

- 3:00–3:45 PM ET
- 4:00–4:45 PM ET

If neither window works, feel free to suggest a nearby alternative that afternoon. Once we align on timing, I'll send a calendar invite.

Thanks, and I'm looking forward to connecting.

Very respectfully,
Jacob Bevier

Hi Joe,

I hope all is well.

I'm attaching the latest testing report and summary deck from ARE Labs related to the cleanser spray coverage and vertical deposition work. The results were very helpful and point strongly toward the actuator/latch geometry as a key factor influencing spray direction and overall coverage.

I'm in the process of coordinating a collaborative call with ARE Labs and our aerosol/valve partner so we can walk through the findings together and align

on mechanical design considerations before proceeding further. Given your role on the mechanical side, I'd really value your perspective in that discussion.

Could you let me know your availability over the next week or so for a 30–45 minute call? I'm expecting to coordinate across East and West Coast schedules and will try to find a time that works for everyone.

Looking forward to connecting and moving this forward together.

Very respectfully,
Jacob Bevier
