Hi Weston,

That works great — thank you.

If you don't mind scheduling the meeting for **Thursday, February 6 at 3:00 PM ET**, that would be perfect. Once it's on the calendar, I'll forward the invite to the appropriate folks on my end.

Appreciate it, and I'm looking forward to the discussion.

Very respectfully,

Jacob Bevier

Jacob,

Thank you for your email. That sounds great and I agree a meeting is a good plan to get aligned for moving forward. Thursday at 3PM ET works on our end. Either I can make the meeting and you can send it to whoever you want on your end or you can and send the invite. Just let me know!

Best,

Weston Schaper

Hi Weston,

Thanks again for the thorough report and summary — the findings have been very helpful.

I'm coordinating a collaborative call with Spray Products and the mechanical design team so we can walk through the results together and align on next steps before moving forward.

We're aiming for **Thursday, February 6 in the afternoon (Eastern Time)**. Would either of the following work on your end?

- 3:00–3:45 PM ET
- 4:00–4:45 PM ET

If those don't work, feel free to suggest a nearby time that afternoon. Once we have alignment, I'll send out a calendar invite.

Thanks again, and I look forward to the discussion.

Very respectfully, Jacob Bevier 7604903416

Hi Weston,

Thank you for sending both the report and the updated deck — I appreciate you including everything, and the data is very helpful.

After reviewing the results, I agree with the primary takeaway that the actuator/latch geometry is the dominant variable impacting plume alignment and coverage. Trial 2 clearly shows that vertical reach and lid deposition are achievable when the discharge behavior is favorable, while the subsequent trials reinforce how sensitive performance is to off-axis loading during actuation.

My next step on our side will be to loop in both the mechanical engineer and the aerosol/valve partner so we can align on a path forward. I'm planning to reach out to each of them to see if I can coordinate a collaborative call with everyone — likely spanning East Coast and West Coast time zones — to walk through the findings together and agree on the best corrective approach before any additional testing.

I'll follow up once I have a sense of availability and proposed times. In the meantime, thanks again to you and the team for the thorough work and clear documentation.

Very respectfully, Jacob Bevier 7604903416

Jacob,

I have attached the report from testing. I have also attached an update with the same results/data. My scientist made the update, and then realized we needed the report, so I figured I would send you both.

Let me know if you want to schedule a time to go over it or if you have any questions/comments. One big takeaway is that the actuator mechanism is a little tab you press down adjacent to the actual orifice/nozzle. The issue we found was when you press on the tab to actuate the can, this angles the nozzle down also, which causes a large portion of the spray to be angled during its full emptying.

Anyways, let us know your thoughts!

Best,

Weston Schaper

Subject: Testing Update

Jacob,

I hope all is well. We tested 2 of the cans and saw a similar spray pattern where the mass is mostly off to one side/similar the previous cans. We have 1 can left to test. But wanted to reach out before we proceeded.

We can either hop on a meeting or we can finish testing on our end, send you a report, and then meet.

Let me know your thoughts.

Best,

Weston

Jacob,

We received the cans and have time to test today. We will follow up with results. Let us know if you have any questions in the meantime.

Best,

Weston

Jacob,

Nick is someone on our end and they were mistakenly added. Apologies for the confusion. We have not received the sample cans yet but will definitely let you know as soon as we do!

Okay thanks Ingrid,

Who is nick@ampinnovations.com which is under my name on the invoice? Please keep sarahjbraganini@gmail.com in copy, especially when it comes to invoices. I will get this over to the team for review and we will go from there. To verify, have you received the cans from Spray Products already?

Lastly, it is Brag & Bev, only one g in Brag.

Thanks for the update and will speak soon. Have a great rest of your week and an even better weekend!

Very respectfully, Jacob Bevier 7604903416
