Weston, good afternoon,

I have a couple cans that I need testing and analysis for, literally 2 cans. Been nearly impossible to find someone to work with a small startup to fill any cans, which I understand, but that doesn't make it any easier.

Could I use your services to test these two cans for spray height and diameter, cleaning effectiveness, total coverage and anything else you test for. Would you be able to give my chemist recommendations to reach the desired effects or he could probably use the data to determine what needs tweaked. Either way is this something we can work together on and how do we make this happen?

Very respectfully,
Jacob Bevier

Jacob,

Just following up. After talking with our team, here is what I think you should do. Our lab is well equipped to test your products during the development phase. As far as the formulation, that would be significantly more work and time for us and I think I have a viable solution that would work best for everyone.

We know someone from Aerosol Technical Solutions. His name is John Chadwick (chadwick.john@gmail.com). I think he is better equipped to help you with some of your early

phase development. Jamie just spoke to him on the phone yesterday and mentioned your product briefly to see if that was something he might be able to help you with.

My plan is to send an introductory email to you with him on the email and then you can connect with him. I am more than happy to hop on a call with both if you at any point if you think it would help or, assuming he can help you, as the development progresses.

Perhaps he can help navigate the formulation phase and if you need us to test, we can do that no problem.

If this plan sounds good to you, I will follow up with another email with him on it and we can go from there.

Best,

Weston Schaper

Sounds good Weston,

I have only been learning more and more as I talk to those in this field. I have a couple of ideas/options as far as a way forward so I am eager to see what you think.

I will keep an eye out for your email, no rush and thanks for the update.

Very respectfully,

Jacob Bevier

Jacob,

Just wanted to let you know that I hadn't forgot about you and our discussion about your testing/product needs. We are currently a little short staffed and are pretty busy. I planned to send you a detailed response to how we can help to you later today (or tomorrow at the latest).

I will follow up!

Best,

Weston Schaper
