Dear Prof. Stone,

I'm **Jacob Bevier**, co-founder of **Brag & Bev LLC**. We've developed an aerosol prototype that currently behaves like a deodorizer — good coverage, vertical reach, and consistency — but our next step is to transform it into a **true cleanser** with measurable cleaning performance while staying **VOC-compliant**.

Your group's work on aerosol chemical composition and transformations seems closely aligned with the challenges we are facing. I'd like to explore whether your lab could provide insight into:

- Spray/droplet characterization (size distribution, coverage, pooling)
- Formulation improvements for cleaning action under VOC limits
- Guidance on actuator/nozzle/can selection for reliable spray behavior

We have funding available, an NDA ready, and prototype test data to share. Would you be open to a ~20-minute call to see if this aligns with your group's expertise?

Warm regards,

Jacob Bevier
