---

Dear Dr. Marr,

My name is **Jacob Bevier**, co-founder of Brag & Bev LLC. We have a deodorizer-baseline aerosol prototype with good spray coverage and reach, and our next goal is to develop a **VOC-compliant cleanser** with real cleaning power.

I believe your work in aerosol generation, air behavior, and measurement would make you a great partner. Specifically, I am looking for help with:

- Quantitative spray performance (droplet size distribution, uniform coverage, minimizing pooling)
- Guidance on hardware pairing (actuator/nozzle/can) so the cleaning formulation behaves well in production
- Formulation insights to maintain cleaning efficacy while adhering to VOC limits

Would you be open to a ~20-minute call to see if this aligns with your lab's capabilities? I'm ready to share data and test constraints ahead of time.

Best regards,

Jacob Bevier
