Dear Mr. Dave,

Thank you for your reply and interest. By way of introduction, **Brag & Bev LLC (Braganini and Bevier)** was founded solely around this concept, and we have dedicated a sizable investment to bringing it to market. I am a retired and 100% disabled veteran, currently working as a cybersecurity analyst for the U.S. Department of Transportation, and I hold a Master's degree in Cybersecurity focused on AI. That being said, this field is way outside my core expertise, I am determined to partner with the right team to make this product a real-world solution that every household will find useful.

The Vision, the Minimum Viable Product will consist of an aerosol can contained within a thin housing that will trigger actuation and ensure stability and position of the cleaner. The **mechanical aspects** of our **patent-pending device** are already conceptualized. However, finalizing the **can size** is critical so that the mechanical design can move forward. The larger challenge lies in formulation: achieving **VOC compliance as a cleanser** (not just as a deodorizer) while ensuring operability of the device and delivering **full coverage cleaning performance** within a confined space of approximately 30" W × 30" L × 50" H.

This is where we hope Uno Formulations' expertise can help us navigate both the regulatory and technical hurdles. If you are open, I would welcome the opportunity to discuss next steps and collaboration potential.

Very respectfully,

Jacob Bevier

Co-Founder, Brag & Bev LLC

Dear Jacob

Thanks for getting in touch.

We are interested to pursue the discussions with you as it looks like an interesting development.

I request you share a quick introduction of your company, products and your vision as a starter.

Regards,

Siddharth Dave

Dear Mr. Dave / Uno Formulations Team,

My name is **Jacob Bevier** — I am a retired/disabled veteran, currently a cybersecurity analyst at the U.S. Department of Transportation, and co-founder of **Brag & Bev LLC**. We are developing a **VOC-compliant aerosol cleanser** with strong atomization and spray performance, and we are looking for a **formulation partner** to help bring this product to market.

Our current prototype demonstrates excellent spray coverage and vertical reach using a lemon-scented deodorizer baseline, but the next step is to:

- Refine the **formulation to enhance cleaning power** while remaining under VOC limits.

- Match the **actuator, nozzle, and can** to achieve consistent spray behavior.
- Prepare for **scalable production and compliance testing**.

We have **funding in place** to support the development of a minimum viable product and are actively seeking a formulation partner with aerosol expertise.

Would Uno Formulations be open to a discussion about potential collaboration or contract development support? I would be happy to share test results and a short presentation that outlines the current status and key constraints.

Thank you for your time and consideration. I look forward to your thoughts.

Very respectfully,

Jacob Bevier
