Dear Dr. Löndahl and Mr. Nilsson,

My name is **Jacob Bevier**, co-founder of **Brag & Bev LLC**. We are developing an aerosol spray prototype that presently functions like a deodorizer, but our next goal is to evolve it into a **true cleanser** with verified cleaning efficacy, hardware reliability, and compliance with VOC limits.

The Aerosol and Climate Lab at Lund appears well-equipped for precise aerosol measurement and experimental work. I would greatly appreciate the opportunity to discuss whether your team could assist with:

- **Measurement of spray performance:** droplet size, coverage, vertical reach, pooling
- **Formulation changes** to enhance cleaning power while staying VOC-compliant
- **Optimization of actuator/nozzle/can** to deliver consistent spray behavior
- **Lab access or contract testing support**, including guidance on hardware/formulation interplay

We have **funding in place**, an **NDA prepared**, and data/constraints ready to share. Would you be open to a ~20-minute call to explore whether this could align with your lab's expertise and facilities?

Thank you for your time and consideration.

Warm regards,

Jacob Bevier

Co-Founder, Brag & Bev LLC
