Hey Jim,

Hope you are well! I wanted to follow up directly regarding the third actuator option and the next round of cans intended for ARE Labs.

At this stage, testing, CAD progression with Mike, and overall timeline alignment are all dependent on this next iteration moving forward. We're currently at a standstill without clarity on:

- Whether the alternate actuator has been received
- If cans have been produced using that actuator
- Estimated shipment timing to ARE Labs
- Updated timeline from your side

Even a brief status update would help us recalibrate and keep the project moving.

When you respond, would you mind replying on the full thread with Mike and Weston included so everyone stays aligned on timing and next steps? That will help prevent any disconnect as we transition into the final validation round and design refinement.

We appreciate the support and are eager to maintain momentum.

Very respectfully,

Jacob Bevier
