Hi Joe,

I hope all is well.

I'm attaching the latest testing report and summary deck from ARE Labs related to the cleanser spray coverage and vertical deposition work. The results were very helpful and point strongly toward the actuator/latch geometry as a key factor influencing spray direction and overall coverage.

I'm in the process of coordinating a collaborative call with ARE Labs and our aerosol/valve partner so we can walk through the findings together and align on mechanical design considerations before proceeding further. Given your role on the mechanical side, I'd really value your perspective in that discussion.

Could you let me know your availability over the next week or so for a 30–45 minute call? I'm expecting to coordinate across East and West Coast schedules and will try to find a time that works for everyone.

Looking forward to connecting and moving this forward together.

Very respectfully,

Jacob Bevier
