Hey Weston, Jim, Mike, and Brag & Bev Team!

I wanted to take a moment to formally introduce everyone and align us on where we are and where we're headed next.

First, I think we've assembled a strong team here, it is **very** encouraging. I met with **Mike Johnston** today from Rabbit Product Development, who is stepping in on the mechanical engineering side. Mike is getting up to speed on the prior mechanical work, and I've shared the last two ARE Labs testing iterations and reports in a shared folder so he has full visibility as he reviews them.

From a status and next-steps perspective:

- **Jim** is currently waiting on the additional (third) actuator to come in. Once available, he plans to send a small set of cans using this actuator to **Weston/ARE Labs**, ideally late this week or early next week.
- After **Weston and Braedon** complete this third testing iteration, my recommendation is that we schedule an **all-hands-on-deck meeting** with everyone on this thread.
- The goal of that meeting will be to review the results together and make a final determination on whether the can configuration is ready to move fully into mechanical housing design. As discussed in last Friday's meeting with Jim and Weston, we were already very close to that conclusion—this final test is intended to confirm and close the loop.

In parallel, **Mike**, if you could please reply to this thread with your preferred shipping address, that would be helpful. Jim from Spray Products can then send you a can, sooner than later—**filled if possible so you have full weight** and **equipped with the conical actuator**—so you have something representative of what we are likely to decide upon following final testing and can begin incorporating it accurately into the CAD.

Appreciate everyone's collaboration to date. We're in a good position, and I'm looking forward to aligning on the final data and moving **decisively** into the next phase.

Very respectfully,
Jacob Bevier

This reads clean, technical, and intentional—no ambiguity, no overcommitment.

If you want:

- a **shorter, more direct version**, or
-

Very respectfully,
Jacob Bevier
